(Ph.D. program of the Faculty).

Education
Patient care
Research

Patient Care

- Primary care
- Specialist care
- High level specialist care

Regional Patient Care Center

High level specialist care:

surgical and orthodontic care of dysgnathia
interdisciplinary treatment of cleft palate patients
special care of people with disabilities
diseases of oral mucosa
prosthetic rehabilitation of facial defects
complex treatment of the temporomandibular joints

Education

The Faculty of Dentistry training proceeds in the form of regular, uniform, undivided basic training over a period of 5 years.

Education

Our Faculty introduced a new EU-compatible educational program from the academic year 2013/2014, designed in a modular fashion which basis was provided by the „Profile and Competencies for the European Dentist”.

Education

This new education program puts special effort to introducing and teaching specific dental training courses.

Education

It offers the possibility of specialization in content, which allows the most modern European Union requirements and competencies to be developed at the Faculty of Dentistry of the University of Szeged.

Education

- Basic module
- Preclinical module
- Clinical module

Accredited, EU-compliant curriculum

Practice-centered education: ratio of practice is at least 65%. Practice involves manual training, patient assessment and management, and a 2-year clinical module where students treat real patients.

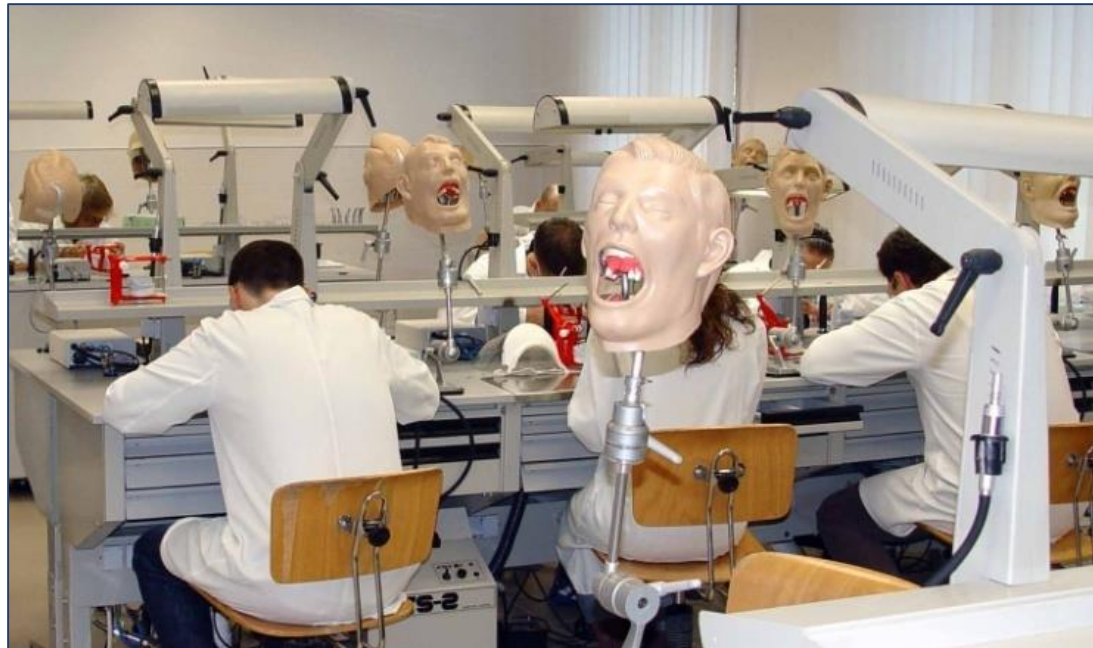

Basic module

- The first two years of basic module where students get acquainted with basic subjects such as anatomy, biochemistry, biology, physics, physiology, and so on.
- Our students participate in dental basic courses (introduction to dentistry, dental equipment, dental materials and technology, dental anatomy, conservative dental and prosthetic prophylaxis).

Preclinical module

- The two semesters of the third year have the preclinical module.
- In addition to pathophysiology and pathology subjects, oral and parodontology basics are also the basis for dental training.
- Some of the exercises consist of skill-developing manual instruction.

Preclinical module

In the lab, you can practice the necessary skills on the so called phantom heads, posture, the use of instruments and the handling of materials.

Preclinical module

- The first year is followed by summer practice, when students get to know dental clinics, they perform smaller tasks as assistant.
- At the end of the second year, you can take part in dental technology practice in the laboratory.

Clinical module

- Summer practice after completed 3rd year in oral surgery

practices are continued under the supervision of tutors

Clinical module

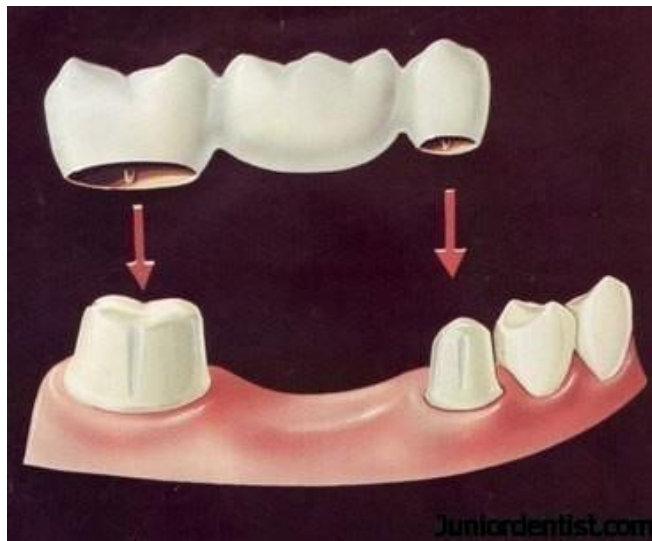

- Fillings, endodontic treatments, crowns, dentures, etc.

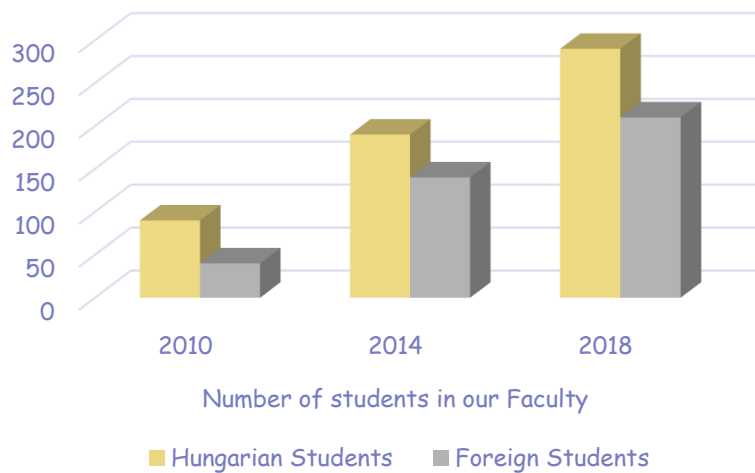

Clinical module

- Summer practice after 4th year general dental practice for 4 weeks.

Educational program:
Dentist, *Doctor Medicinae Dentaire* - DMD
5 years

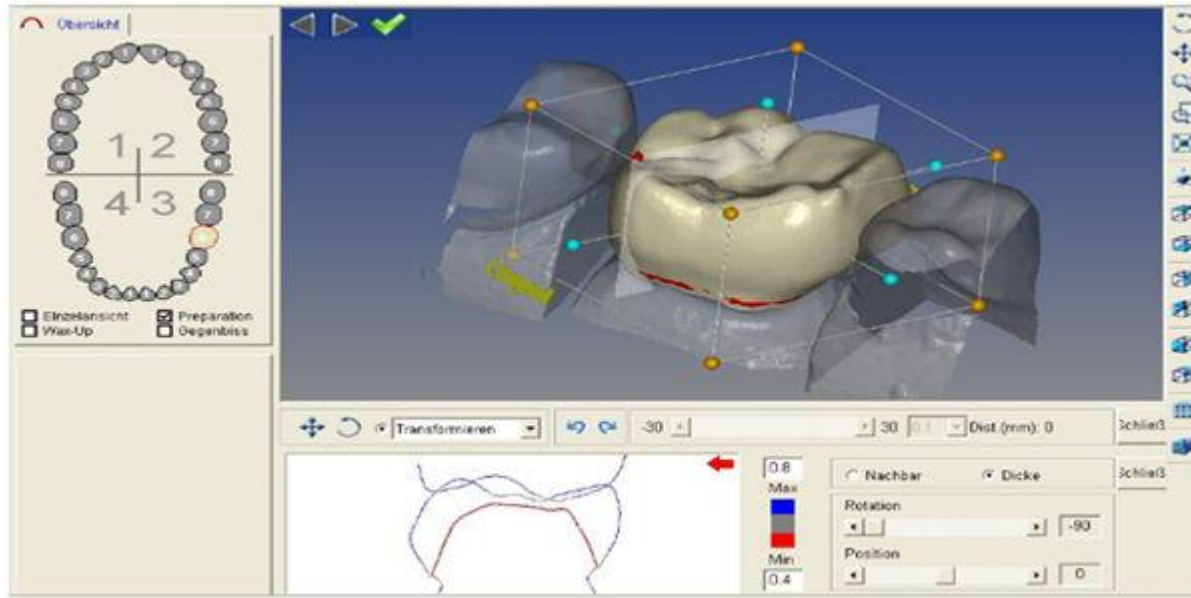

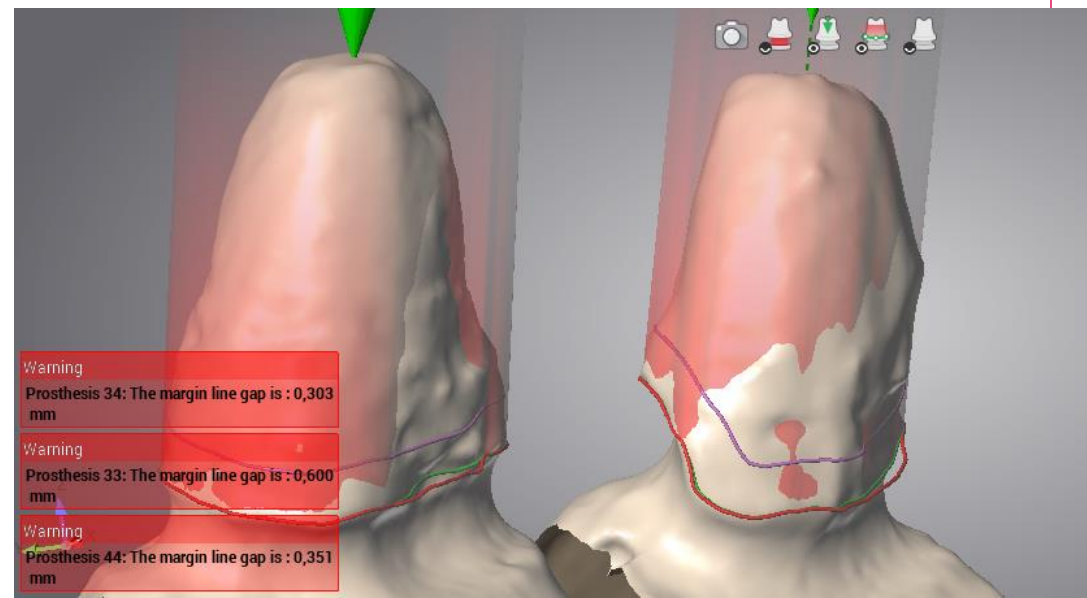

Highly acknowledged degree

Fully accepted within the
European Union

Acknowledged in several other
countries

Digital dentistry
