ASP STERRAD[®] NX[™]

Speed and versatility in a compact size

Designed with the Next Generation technology, the STERRAD[®] NX[™] System is ASP's compact size sterilizer ideal for use anywhere in the hospital:

- Two tiered 30 liter chamber and two cycle options for increased productivity:
 - 28-minute Standard cycle for most surgical instruments
 - 38-minute Advanced cycle for single-channel flexible endoscopes
- Space-efficient STERRAD[®] NX[™] System can be easily cart-mounted and moved where needed
- Provides terminally sterile, packaged instruments thereby eliminating the need to compromise with liquid biocides

Consult the STERRAD[®] Sterility Guide, www.sterradsterilityguide.com, refer to the STERRAD[®] Sterilization System User's Guide or contact medical device manufacturer for the detailed processing information

A sterilizer for all your department's needs

The rapid 28-minute Standard cycle time combined with the dry gentle sterilization process make the compact STERRAD[®] NX[™] the ideal choice for every department where rapid instrument turnaround is crucial. STERRAD[®] NX[™] raises the standard of care by providing terminally sterile, packaged instruments at hand when you need them.

- A Standard cycle time of 28 minutes for most surgical devices or an Advanced cycle of 38 minutes for single-channel flexible scopes ensure quick instrument turnaround and eliminate the need for duplicate inventories
- As all other STERRAD[®] systems, STERRAD[®] NX[™] is safe for healthcare professionals, patients, instruments and environments. The process by-products are non-toxic oxygen and water vapor. Requires a simple, standard electrical outlet, which combined with its compact size allows for maximum mobility. No special heat boosters, plumbing, aeration, or ventilation required
- Includes innovative software that allows heightened security, networking, and diagnostic abilities
