

Lanza™

Tapered Specialty Shaver Blade

Now available in 15° pre-bent shoulder and knee, and hip configurations.

CONMED's NEW Lanza™ Tapered Specialty Shaver Blade has a tapered distal tip, smooth cutting profile and dual-inner cutting window that is designed to provide precise, efficient resection in tight anatomical spaces and sensitive areas.

Features and Benefits

Better Access

Tapered Distal Tip – Designed to provide easy access to tight spaces, difficult-to-reach anatomy and around sensitive areas.

Faster Cutting

Dual Inner Cutting Window – Compared to a standard blade¹, the dual inner cutting window provides twice as many cuts per rotation to help maximize volumetric resection.

Reduced Particulate

TrimRite® Steel & Shaft Lubrication – Designed to reduce metal particulate generation, the shrink tubing on the inner blade shaft provides a barrier to prevent metal-on-metal contact², while the exterior features hardened TrimRite® stainless steel that helps maintain a sharp cutting edge and blade integrity.³

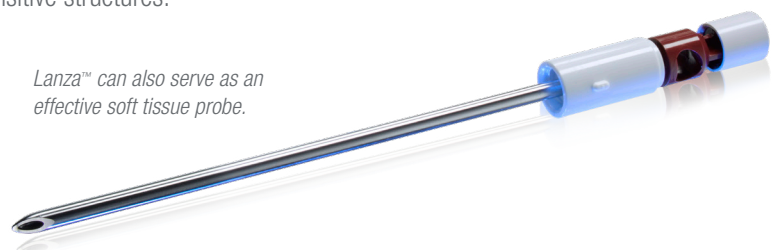

Smooth Cutting

Smooth Cutting Profile – Engineered to prevent snagging on soft tissue when navigating tight spaces, while the shallow exterior window and dual inner cutting window are designed to reduce clogging.

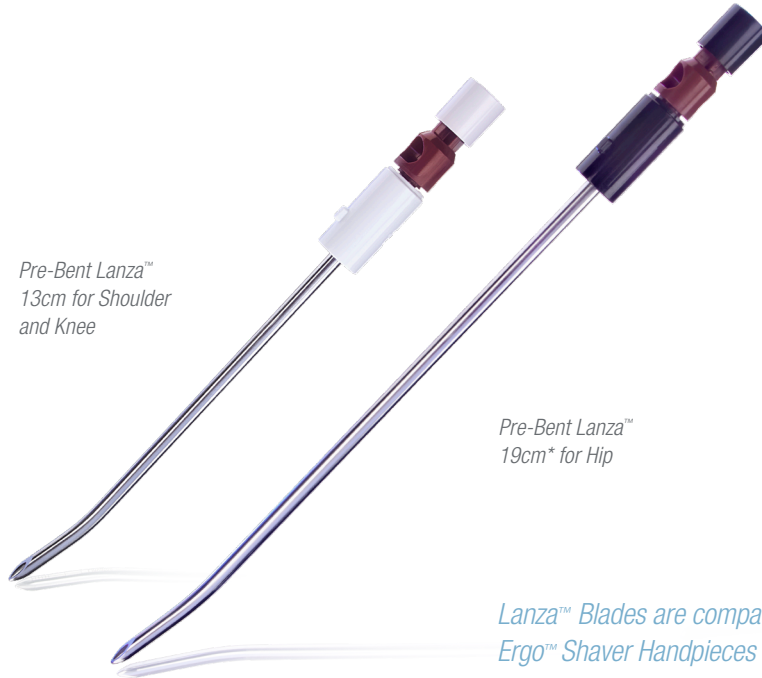

15° Pre-bent Configurations

13cm and 19cm* Lengths – Now available in shoulder and knee, and hip length configurations. Designed to provide precise, efficient resection, the two 15° pre-bent options make it easier to navigate around tight anatomical spaces and sensitive structures.

Lanza™ can also serve as an effective soft tissue probe.

¹Standard single cutting window blade. ²TR13-200. ³TR17-00566-1.
*Not for sale at this time.

Lanza™ Blades are compatible with CONMED's Advantage® Turbo and Ergo™ Shaver Handpieces and our D3000 and D4000 consoles.
