## REVIEW

# Clinical review: use of venous oxygen saturations as a goal – a yet unfinished puzzle

Paul van Beest<sup>1\*</sup>, Götz Wietasch<sup>1</sup>, Thomas Scheeren<sup>1</sup>, Peter Spronk<sup>2,3,4</sup> and Michaël Kuiper<sup>3,4,5</sup>

*Critical Care* 2011, 15:232

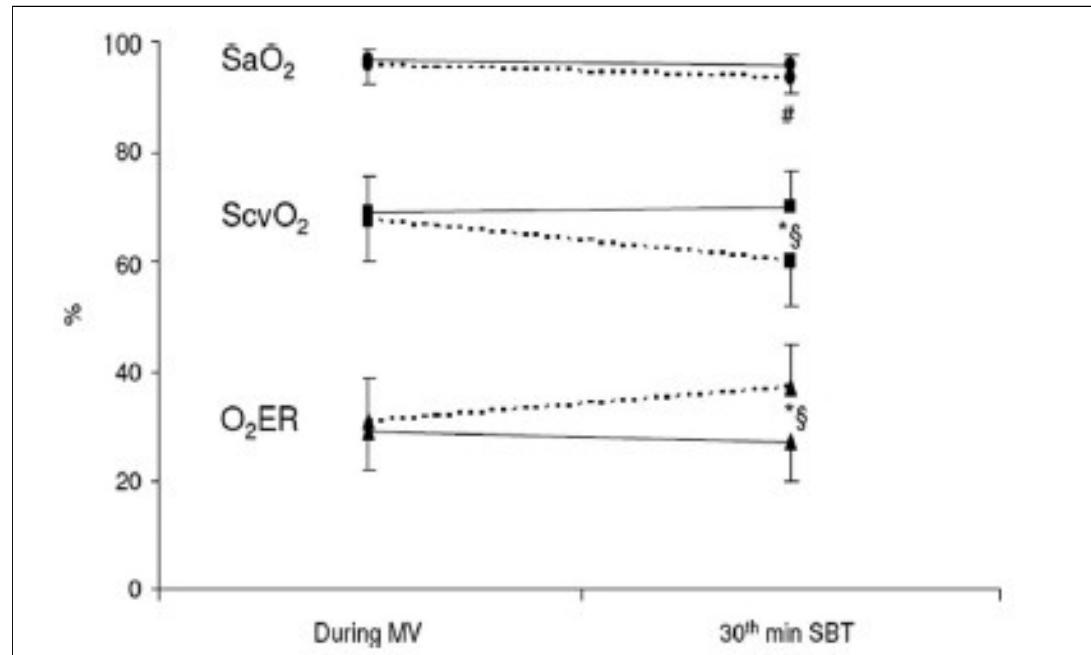

caution. Evaluating the available evidence in a clinical setting, we conclude that low venous oxygen saturations are an important warning sign for the inadequacy of DO<sub>2</sub> to meet oxygen demands.

# Central venous saturation is a predictor of reintubation in difficult-to-wean patients\*

Transzfundálnád?

# Összefoglalás

- minden az  $O_2$  körül forog
  - Mérésére: nincs arany standard
- Transzfúzió nem veszélytelen
  - Gyakran feleslegesen transzfundálunk
- $ScvO_2$ 
  - Jól korrelál a  $VO_2/DO_2$ -vel
  - Használható mint fiziológiai transzfúziós indikátor
  - Dinamikus paraméterként is használható

Treat the triggers, not the figures!®

# A legjobb transzfúziós indikátor:

Auguste Rodin: A Gondolkodó

# Mottó

Nem az a lényeg, hogy a jó döntést  
hoztuk-e, hanem, hogy minden  
megtettünk-e azért, hogy a jó döntést  
hozhassuk.
